Varundeep Sengar

Python Full Stack Developer | Software Engineer

Email: sengarvarundeep@gmail.com | Phone: +91 95890 97257 | Indore, India

GitHub: github.com/Varundeep09 | LinkedIn: linkedin.com/in/varundeep-sengar

Professional Summary

Python developer and Computer Science graduate with hands-on experience building backend applications, REST APIs, data pipelines, and database-backed projects. Experienced with Python, Django, FastAPI, SQL, and applied machine learning, including model evaluation and API-based prediction workflows. Building frontend capability in HTML, CSS, and JavaScript while strengthening end-to-end software development skills.

Technical Skills

Languages: Python, SQL; HTML and CSS fundamentals; JavaScript basics
Backend: Django, FastAPI, REST API design, Pydantic, CORS, Authentication, Role-Based Access Control (RBAC)
Databases: MySQL, PostgreSQL, SQLite **Tools:** Git, GitHub, VS Code, Jupyter Notebook, Postman
Data and ML: Pandas, NumPy, scikit-learn, EDA, Data Cleaning, Feature Engineering, Statistical Analysis, Classification, Model Evaluation
Visualization: Power BI, Excel, Matplotlib, Seaborn

Experience and Training

Graduate Trainee Engineer Intern | Alphanext Technology Solutions *May 2026 -- Jul 2026*

- Automated Python ETL workflows to extract, clean, and transform 20,000+ records from multiple data sources for downstream analysis.
- Prepared analysis-ready datasets by addressing missing values, outliers, and inconsistencies across pipeline stages.
- Applied statistical analysis to explore patterns and relationships and contribute to predictive-modelling initiatives.

Data Analytics and Data Science Trainee | Tokyo Quant *Jun 2025 -- Jan 2026*

- Used Python, Pandas, NumPy, and SQL for exploratory data analysis, data cleaning, and trend identification across datasets.
- Developed 3+ analytical dashboards to communicate findings and support data-informed decisions.

Python Development Virtual Internship 6.0 | Infosys Springboard *Nov 2025 -- Jan 2026*

- Developed a Python and FastAPI flight-booking simulator with dynamic pricing and seat-inventory management.
- Applied relational schema design and transaction-consistency concepts to support booking workflows.

Projects

Customer Churn Prediction and Retention Intelligence System *2026*

- Built an end-to-end classification workflow for 7,032 telecom customer records, covering preprocessing, exploratory analysis, model training, and evaluation with Python, Pandas, and scikit-learn.
- Used SQLite and six business queries alongside chi-square testing and point-biserial correlation to examine churn patterns; observed higher churn among first-year customers than customers with 5+ years of tenure.
- Compared Logistic Regression and Random Forest, selected Logistic Regression based on accuracy and F1 score, and exposed predictions through FastAPI endpoints with Pydantic validation for an interactive dashboard and rule-based retention playbook.

Campus Circle -- Academic Networking Platform *2025*

- Built a Django platform connecting students, alumni, and faculty through academic posts, mentorship requests, and events.
- Implemented authentication, role-based access control, and MySQL-backed relational models to manage users and platform activities.
- Structured role-aware views and relational data models to support data integrity across core platform workflows.

Education

IPS Academy Institute of Engineering and Science, Indore *2022 -- 2026*
B.Tech, Computer Science (Artificial Intelligence and Machine Learning) CGPA: 8.6/10 (86%)

Higher Secondary (Class XII), PCM, MP Board 2022, 65%
High School (Class X), CBSE Board 2020, 82%

Certifications

RDBMS PostgreSQL -- Spoken Tutorial Project, IIT Bombay; Infosys Python Foundation -- ICT Academy and Infosys Foundation; Infosys Springboard Python Development Virtual Internship 6.0.
